

Big Data & Analytics

Concepts, technologies and the IBM perspective

Alberto Ortiz
Big Data & Analytics Architect

January 2015

What is Big Data?

Definition of Big Data

In short, the term Big Data applies to information that can't be processed or analyzed using traditional processes or tools.

Big data is an all-encompassing term for any collection of data sets so large or complex that it becomes difficult to process them using traditional data processing applications.

"Big Data." Wikipedia. Wikimedia Foundation, n.d. Web. 05 Jan. 2015.

Zikopoulos, Paul, Chris Eaton, Tom Deutsch, Dirk Deroos, and George Lapis. Understanding Big Data: Analytics for Enterprise Class Hadoop and Streaming Data. New York: McGraw-Hill, 2012. 3. Print.

... data comes from everywhere: sensors used to gather climate information, posts to social media sites, digital pictures and videos, purchase transaction records, and cell phone GPS signals to name a few. This data is big data.

"Bringing Big Data to the Enterprise." IBM. N.p., n.d. Web. 07 Jan. 2015.

- It's not a specific type of software
- It's not a product
- It's not a specific amount of data
- It's not just social media

40 ZETTABYTES
[43 TRILLION GIGABYTES]
of data will be created by 2020, an increase of 300 times from 2005

It's estimated that **2.5 QUINTILLION BYTES** [2.3 BILLION GIGABYTES] of data are created each day

Most companies in the U.S. have at least **100 TERABYTES** [100,000 GIGABYTES] of data stored

Volume SCALE OF DATA

The FOUR V's of Big Data

From traffic patterns and music downloads to web history and medical records, data is recorded, stored, and analyzed to enable the technology and services that the world relies on every day. But what exactly is big data, and how can these massive amounts of data be used?

As a leader in the sector, IBM data scientists break big data into four dimensions: **Volume, Velocity, Variety and Veracity**

Depending on the industry and organization, big data encompasses information from multiple internal and external sources such as transactions, social media, enterprise content, sensors and mobile devices. Companies can leverage data to adapt their products and services to better meet customer needs, optimize operations and infrastructure, and find new sources of revenue.

By 2015 **4.4 MILLION IT JOBS** will be created globally to support big data, with 1.9 million in the United States

As of 2011, the global size of data in healthcare was estimated to be **150 EXABYTES** [161 BILLION GIGABYTES]

30 BILLION PIECES OF CONTENT are shared on Facebook every month

By 2014, it's anticipated there will be **420 MILLION WEARABLE, WIRELESS HEALTH MONITORS**

Variety DIFFERENT FORMS OF DATA

4 BILLION+ HOURS OF VIDEO are watched on YouTube each month

400 MILLION TWEETS are sent per day by about 200 million monthly active users

The New York Stock Exchange captures **1 TB OF TRADE INFORMATION** during each trading session

Modern cars have close to **100 SENSORS** that monitor items such as fuel level and tire pressure

Velocity ANALYSIS OF STREAMING DATA

By 2016, it is projected there will be **18.9 BILLION NETWORK CONNECTIONS** - almost 2.5 connections per person on earth

1 IN 3 BUSINESS LEADERS don't trust the information they use to make decisions

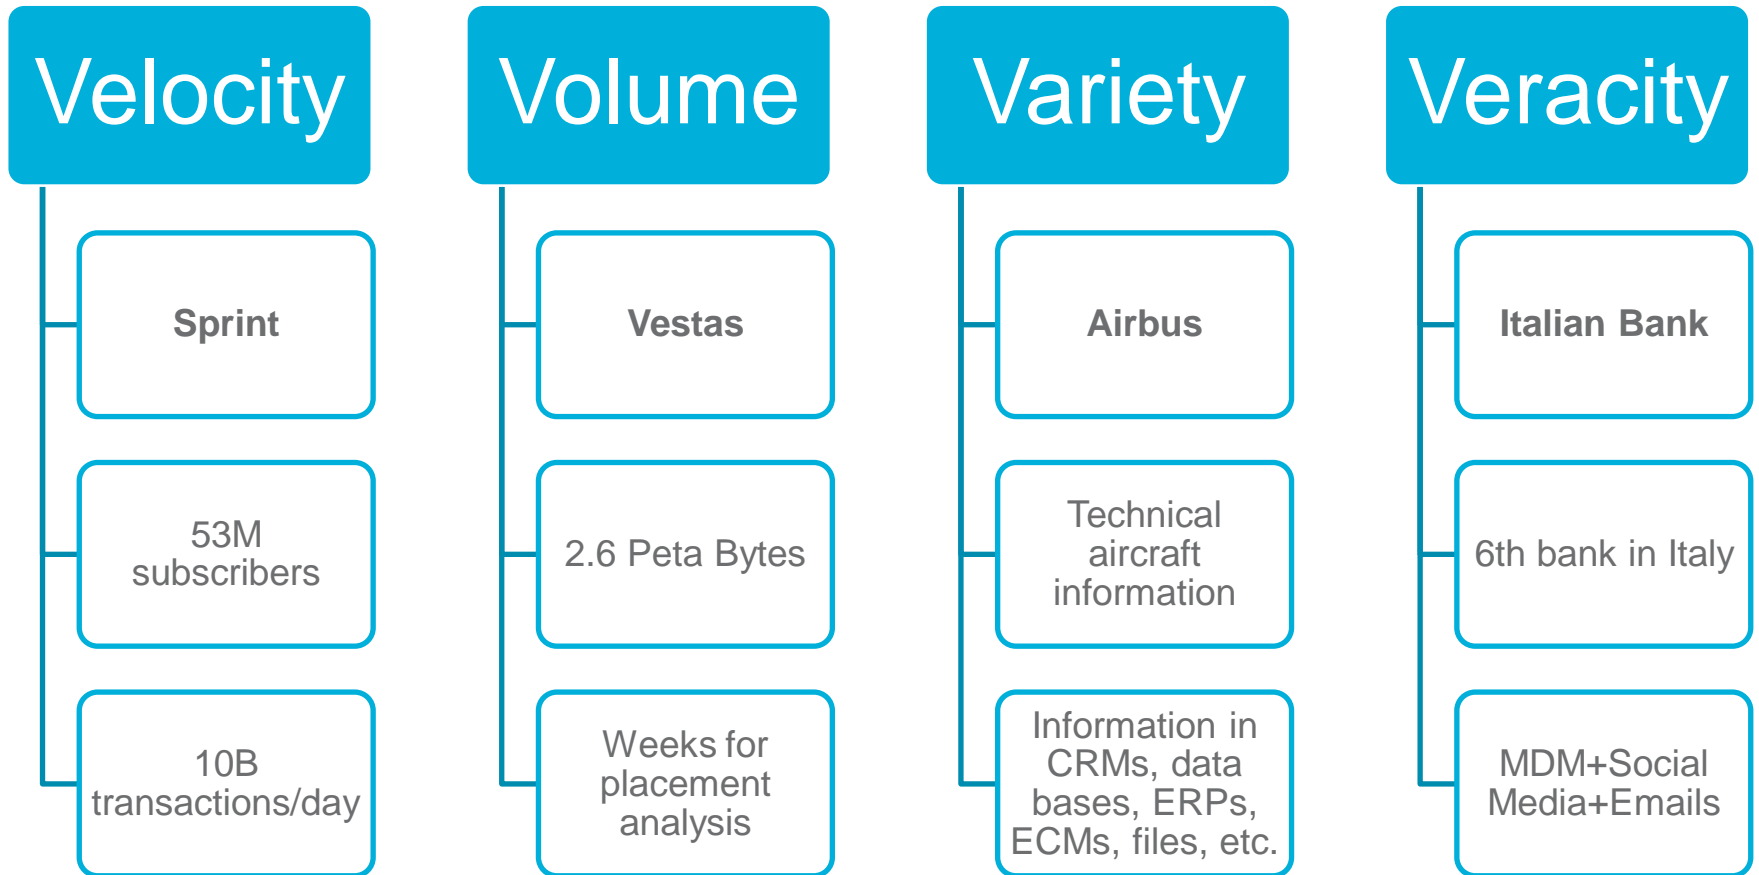

in one survey were unsure of how much of their data was inaccurate

Veracity UNCERTAINTY OF DATA

Poor data quality costs the US economy around **\$3.1 TRILLION A YEAR**

What are the characteristics of Big Data?

Leverage more of the data being captured

TRADITIONAL APPROACH

Analyze small subsets
of information

BIG DATA APPROACH

Analyze
all information

Reduce effort required to leverage data

TRADITIONAL APPROACH

Carefully cleanse information
before any analysis

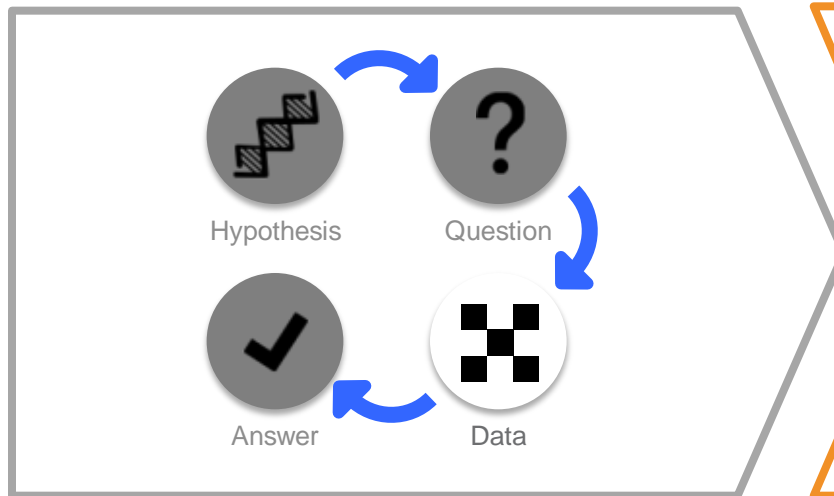

BIG DATA APPROACH

Analyze information as is,
cleanse as needed

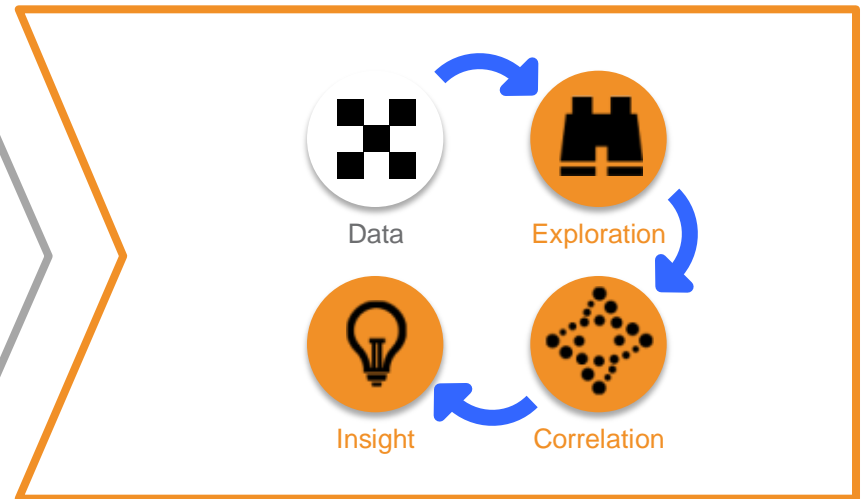

Data leads the way—and sometimes correlations are good enough

TRADITIONAL APPROACH

Start with hypothesis and test against selected data

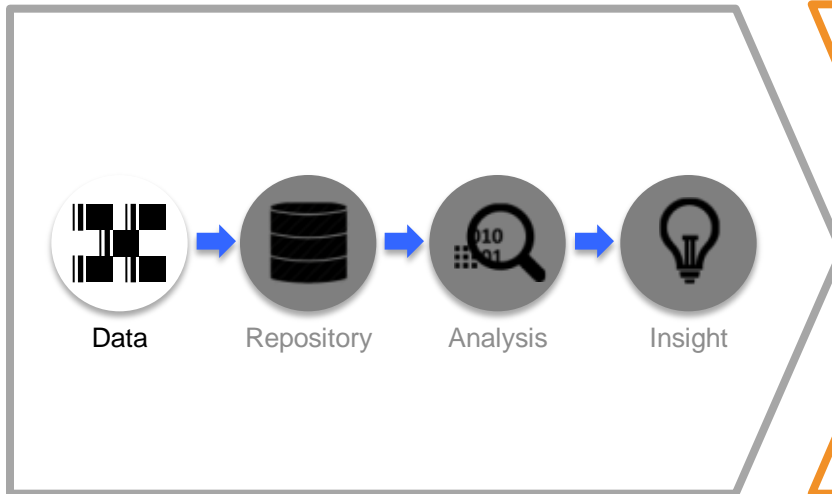

BIG DATA APPROACH

Explore *all* data and identify correlations

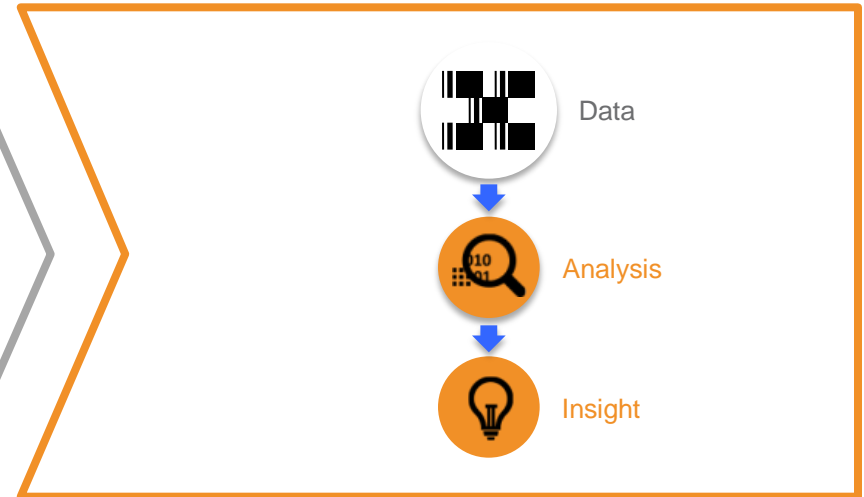

Leverage data as it is captured

TRADITIONAL APPROACH

Analyze data **after** it's been processed and landed in a warehouse or mart

BIG DATA APPROACH

Analyze data **in motion** as it's generated, in real-time

What is analytics?

an·a·lyt·ics

/,anə'lidiks/

noun

the systematic computational analysis of data or statistics.

"content analytics is relevant in many industries"

- information resulting from the systematic analysis of data or statistics.

"these analytics can help you decide if it's time to deliver content in different ways"

Optimization

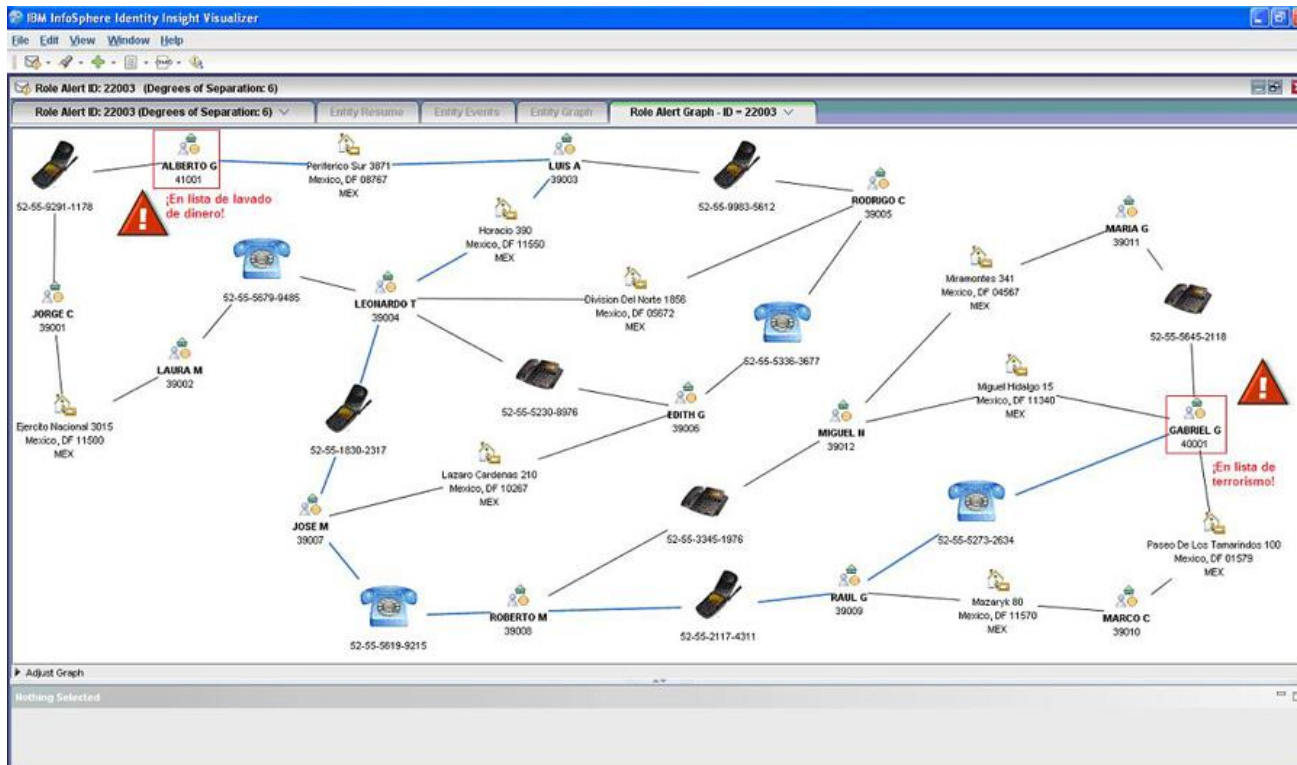

The screenshot shows the IBM ILOG Transportation Analyst 2.6 interface. It features a menu bar (Data, Optimize, View, Solution, Help), a toolbar, and several panes:

- Scenario Manager:** Lists various scenarios such as 'Small Shipment - All LTL Direct', 'Small Shipment - All Hub Stop', 'Small Shipment - Max LTL and Hub Solution', 'Small Shipment - Use of Hubs', 'Small Shipment - Private Fleet vs Co', 'Inbound Network', 'Network with Backhaul Opps', and 'Long Beach DC Shipment Routing'.
- North America View:** A map of North America with a network of nodes and connecting lines, representing a transportation network.
- Shipment Report:** A table with columns: Shipment ID, Shipment Name, Fleet, Vehicle, Carrier, and Start Lead Time. It lists 18 shipments.
- Solution Editing:** A vehicle schedule table for Monday, March 17, 2008, and Tuesday, March 18, 2008. It shows time slots (4 AM, 8 AM, 12 PM, 4 PM, 8 PM, 12 AM) and vehicle assignments for Fleet 1.

Shipment ID	Shipment Name	Fleet	Vehicle	Carrier	Start Lead Time
1	1	Fleet 1	15	Commercial TL	3/17/2008 8:00 AM
2	2	Fleet 1	11	Commercial TL	3/17/2008 8:00 AM
3	3	Fleet 1	6	Commercial TL	3/17/2008 8:00 AM
4	4	Fleet 1	7	LTL Carrier	3/17/2008 8:00 AM
5	5	Fleet 1	3	Commercial TL	3/17/2008 8:00 AM
6	6	Fleet 1	10	Commercial TL	3/17/2008 8:00 AM
7	7	Fleet 1	36	LTL Carrier	3/17/2008 8:00 AM
8	8	Fleet 1	5	Commercial TL	3/17/2008 8:00 AM
9	9	Fleet 1	45	LTL Carrier	3/17/2008 8:00 AM
10	10	Fleet 1	14	LTL Carrier	3/17/2008 8:00 AM
11	11	Fleet 1	18	LTL Carrier	3/17/2008 8:00 AM
12	12	Fleet 1	10	Commercial TL	3/17/2008 8:00 AM
13	13	Fleet 1	23	LTL Carrier	3/17/2008 8:00 AM
14	14	Fleet 1	2	Commercial TL	3/17/2008 8:00 AM
15	15	Fleet 1	6	Commercial TL	3/17/2008 8:00 AM
16	16	Fleet 1	24	LTL Carrier	3/17/2008 8:00 AM
17	17	Fleet 1	25	LTL Carrier	3/17/2008 8:00 AM
18	18	Fleet 1	7	Commercial TL	3/17/2008 8:00 AM
19	19	Fleet 1	8	Commercial TL	1/17/2008 8:00 AM

Who is who? Who knows who?

IBM solutions for BD&A

Watson: state of the art in BD&A

What is Watson?

As a cognitive technology, Watson is a natural extension of what humans can do at their best.

Hypothesis Generation

When asked a question, Watson relies on hypothesis generation and evaluation to rapidly parse relevant evidence and evaluate responses from disparate data.

Natural Language

Watson can read and understand natural language, important in analyzing unstructured data that make up as much as 80 percent of data today.

Dynamic Learning

Through repeated use, Watson literally gets smarter by tracking feedback from its users and learning from both successes and failures.

BIG DATA & ANALYTICS:

Transforming potential into action

By leveraging the natural fusion of big data and analytics, successful organizations can better transform unrefined information into new, actionable business insights. With these insights, companies have the power to embed and automate intelligent decisions into operational systems, driving substantial business outcomes and creating new opportunities for competitive advantage.

ORGANIZATIONAL COMPONENTS	
PART:	DESCRIPTION:
	INFUSE ANALYTICS EVERYWHERE across your organization, creating a culture that encourages employees to make big data central to business processes
	BE PROACTIVE ABOUT PRIVACY, SECURITY AND GOVERNANCE to protect your customers, safeguard your data and foster trust in your company
	INVEST IN WATSON FOUNDATIONS AND IN BIG DATA AND ANALYTICS to nimbly analyze and act on data in motion, while building out your master plan

Companies harnessing the full power of Watson Foundations and of big data and analytics achieve results that can transform nearly every aspect of their business.

- 1 ACQUIRE, GROW AND RETAIN CUSTOMERS
- 2 CREATE NEW BUSINESS MODELS
- 3 TRANSFORM MANAGEMENT PROCESSES
- 4 MANAGE RISK
- 5 OPTIMIZE OPERATIONS: COUNTER FRAUD AND THREATS
- 6 MAXIMIZE INSIGHT, ENSURE TRUST AND IMPROVE IT ECONOMICS

USD1 MILLION SAVED
when XO Communications enhanced its customer retention rates

80% REDUCTION IN REVENUE LEAKAGE
when the Land Transport Authority of Singapore integrated transportation

96% REDUCTION IN PROCESS TIME
when ANCAP gained a real-time view of its business

99% ACCELERATION IN REPORTING
when the Allianz Group built a centralized risk management platform

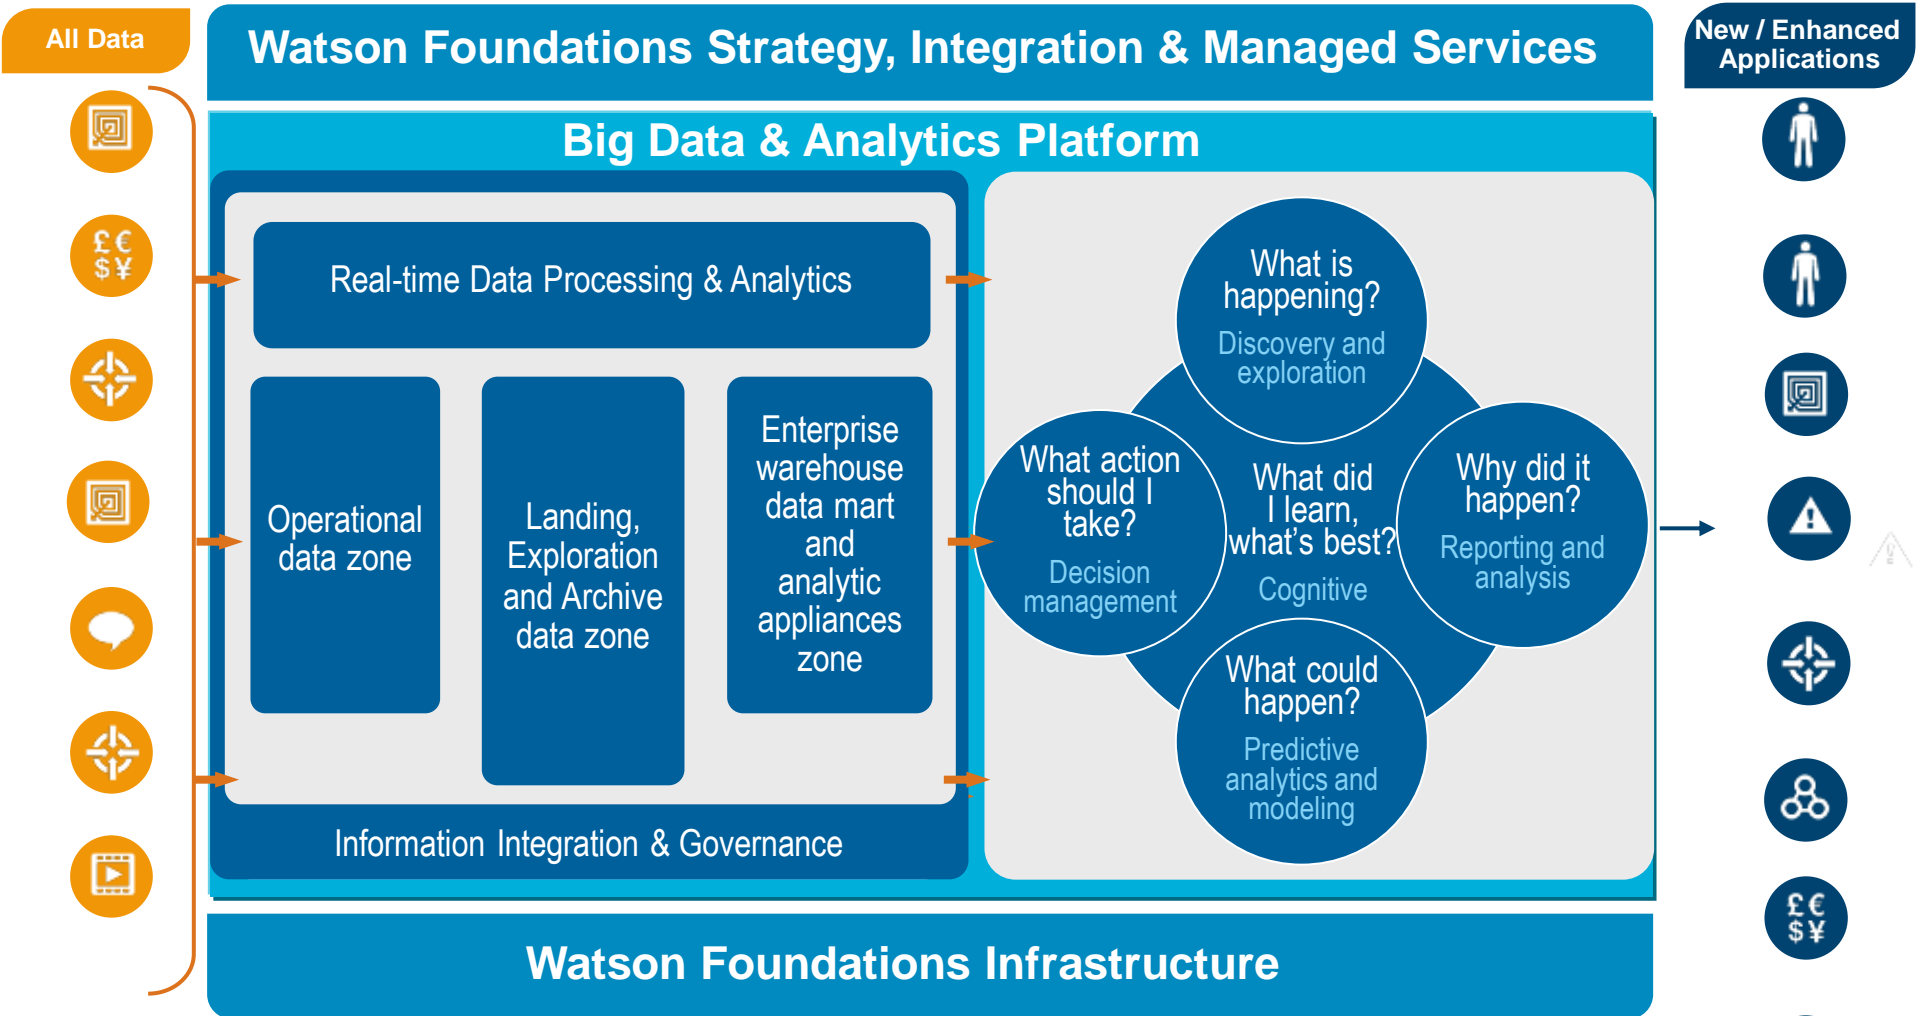

USD2.5 MILLION SAVED IN PAYOUTS
when Santam identified fraudulent customers

3.5 BILLION EMAILS ANALYZED
when Constant Contact determined best practices for maximum response

Watson Foundations

Industry cases using BD&A

Banking

Big Data & Analytics Customer Case Studies

NYSE Euronext enhances trading insights and reporting with IBM PureData platform

Need

- Rapid analysis of trade data to facilitate compliance and regulatory reporting
- New functionality needed to track the value of a listed company, performing trend analysis, and searching for evidence of fraudulent activity
- The previous system trawled through large amounts of irrelevant information to complete searches

Benefits

- Reduced time to run market surveillance by 99%
- Improved ability to detect suspicious trading activity
- Enabled early investigative action, minimizing damage to investing public

<http://www.youtube.com/watch?v=j7KwuGFF9bU>

Government

Big Data & Analytics Customer Case Studies

TerraEchos provides security and intelligence expansion with real-time analysis of streaming data

Need

- Technology solution that would detect, classify, locate and track potential threats to secure its perimeters and border areas

Benefits

- Only vendor providing a Big Data platform for real-time analysis from streaming data for security
- Unprecedented real-time facility surveillance with the ability to process 1.6GB of data per second for insight into any event
- Confidently identify and classify a potential security threat -the system is sensitive enough to distinguish between a bobcat and a bad guy

Real-Time Security

Retail

Big Data & Analytics Customer Case Studies

Constant Contact gains marketing insight from behavior pattern analysis

Need

- Improve their business value proposition and differentiate themselves against other companies that provide email marketing services

Benefits

- IBM is only vendor providing big data platform with integrated text analytics capability
- Constant Contact's combined analysis of time, date, recipient email addresses and email content resulted in up to 25% increase in email opening rate.

Life Sciences

Big Data & Analytics Customer Case Studies

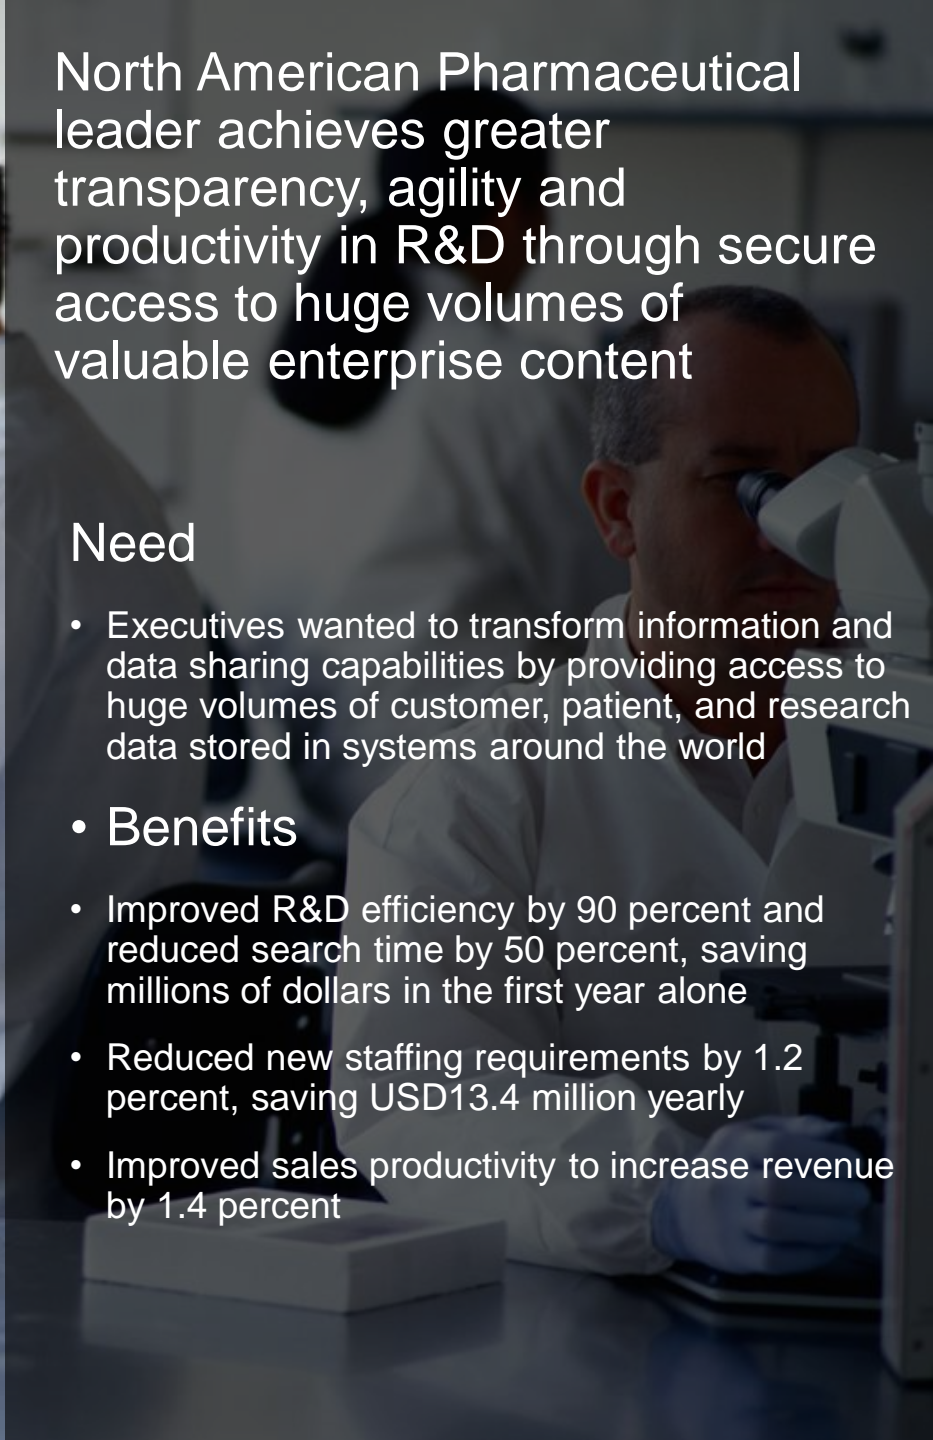

North American Pharmaceutical leader achieves greater transparency, agility and productivity in R&D through secure access to huge volumes of valuable enterprise content

Need

- Executives wanted to transform information and data sharing capabilities by providing access to huge volumes of customer, patient, and research data stored in systems around the world

• Benefits

- Improved R&D efficiency by 90 percent and reduced search time by 50 percent, saving millions of dollars in the first year alone
- Reduced new staffing requirements by 1.2 percent, saving USD13.4 million yearly
- Improved sales productivity to increase revenue by 1.4 percent

Thank you
